

Report

Bermet Talantbekova and Ugonna Emenike

We state that George is guilty.

There have been multiple violation of norms and ethics:

- Prior to hacking, George has violated SPC moral ethics by doing questionable pranks to his coworkers and scamming activity. See pranks_scam in evidence zip file
- There is George's confession to his father that he chose the wrong path. See iamsorry.mp3
- There is a testament of his hacking against SCP. See testament_being_guilty doc in Evidence Zip file
- There is a conversation when George uses a fake Artemis name to make a revenge plan after he has been fired. See Artemis_is_Geroge file in Evidence zip file.
- There has been proof of George creating fake id. See fakeID_iswear_iam_token_screenshot file in evidence zip file
- Just making his laptop to wipe itself is suspicious

See Bash.history file in evidence zip file. It contains:

Proof that the suspect installed several well-known hacking tools, indicating potential malicious activity:

- Hydra: Password cracking tool.
- SSLstrip: Tool for man-in-the-middle attacks.
- Metasploit: Framework for developing and executing exploit code.
- Ettercap: Network traffic manipulation tool.
- Evilgrade: Fake update framework.
- Setoolkit: Social engineering toolkit.
- SQLmap: Automated SQL injection tool.
- Aircrack-ng: Network sniffing and WEP/WPA key cracking.
- Hackertools: General hacking utility.
- LOIC (Low Orbit Ion Cannon): DDoS attack tool.

George ran commands to shred several files:

- incriminatingEvidence.pdf
- alliances.pdf
- com_channel.pdf
- passport.pdf
- birthcertificate.pdf

The use of shred indicates an attempt to permanently delete files by overwriting their content, which suggests a deliberate effort to destroy evidence.:

Attempted to SSH into two systems:

- sketchycomputerpeople.com:22

- choam.space via port 7010 as user george.

This suggests George may have been accessing remote systems, possibly using stolen credentials or setting up backdoors.

George used dangerous commands:

- grub-customizer: Can be used to modify boot settings, potentially to hide evidence or manipulate the system.
- shred: Secure file deletion.

For all tokens we attached screenshots/ text files of all tokens we found. We also included screenshots of cracking passwords, audacity, steghide text file. Please see full token discovery

Tokens

1. #token- <when_opportunity_knocks> # found via "string match" search using autopsy under info.pdg file
2. #token- <go_bees># → Found by inspect elements of the website <https://weratewasps.buzz/?>
3. #token <i_believe_him> found via "string match" search using autopsy under innocent.txt file
4. #token <sudo_apr_install_sl> found via "string match" search using autopsy
5. #token- <what_have_i_done># found via "string match" search using autopsy under **.bash_hist** file
6. #token- <e_macos_verstappen># found via "string match" search using autopsy under bashrc file
7. #token- <this_song_slaps> found via "string match" search using autopsy under home/George/desktop/Hacked/iamsorry.mp4
8. #token- <jam_packets># found via "string match" search using autopsy under home/George/desktop/Hacked/sslkey.log
9. #token- <welcome_to_white_space># found via "string match" search using autopsy under home/gerpge/cahce/mozillafirefox
10. #token- <cerberus_is_there ># found on Madaripur Asylum website <https://madripoor-asylum.com/>, using simple SQL injection ' OR 1=1 --.
11. #token- <in_and_out># via HQ, got it when put longitude and latitude to google maps link: <https://www.google.com/maps/place/33.7754109,-84.3876588>
12. #token- <my_hat_fell_off># via HQ when we put link <https://madripoor-asylum.com> (found link in autopsy)
13. #token- <buzz_out_of_10># Via HQ using link <https://weratewasps.buzz/?> (found link in info.pdf)
14. #token- <swaggyswagster># Via HQ using link <https://api.sketchycomputerpeople.com/admin> (found link in autopsy, business_unimportant)
15. #token- <binary_stegosaurus># creating 60 sec session API key and creating privileged user got token via link <https://api.sketchycomputerpeople.com/admin/swagger> (link given by HQ)

16. #token-<trust_issues># steghide one of the images from Wasp file. Image is called photgentetic.jpg, Passphrase is empty.
17. #token - <lockpicking_100># Lockpicking, gold locker. Image is attached
18. #token-<get_your_id># Via HQ using link found in one of the safes <https://topnotchfakes.bargains/>
19. #token-<that_was_easy> Lockpicking, silver locker
20. #token - <heart_shaped_box> Lockpicking, yellow locker
21. #token <el1t3_h4x0rz> after unlocked file submit_to_boss zip file , conversation text file Password : lightningmcqueen
22. #token <on_days_like_these> we honestly forgot, probably via HQ or live analysis.
23. #token<elves_keep_secrets> found in the Ghidra of secret_exe under to_distribute file (password airspeed)
24. #token-<curl_is_cool># Wireshark , when combined merged.pcap and sslkey.log file
25. #token-<just_like_atlas># Via HQ using link <https://coastguard.lat/resetpassword>
26. # token-<door_stuck ># Unclocked file org_doc file , in irc_chat.txt file , Password is 5k4p8
27. #token - <iswear_im_21># Fake passport, same under the org_doc . zip. file
28. <!-- #token- <fake_promise> #--> Via Inspect Elements on <https://topnotchfakes.bargains/page>
29. <!-- #token <i_like_those_characters> #> Via Inspect Elements on <https://coastguard.lat>
30. #token - <test_your_might># When I saved dummy data, stored cookie token on <https://topnotchfakes.bargains/page>
31. <!-- #token- <moshi_moshi> # Via Inspect Elements on page of diffie Helman exchange topnotchfakes.bargains/diffiemcdiffface
32. #token - <like_a_money_machine># Fake ID found on link <https://topnotchfakes.bargains/mastermind/> (given by previous token)
33. #token <whistles_being_blow> Steghide election.jpg in to_distibutr file. Passphrase is empty
34. #token- <warp_hub > User_Agent switch on browser on page <https://weratewasps.buzz/?> , got acces to secret converstation. User-Agenrt is AqT5J9L+F7NxWs2R
35. #token- <dread_pirate_roberts># Sign sabotage with private key found under Janet_wedding folder "def not key file ". Using sha-256
36. #token - <wow_we_love_tokens># One webpage in plaintext using link to TOR onion page from previous token. <http://llvz4ovn4xylmrmq2mndterfe3hx2ivefeox66epexy23323nx622vyd.onion:32355/>
37. #token-<ogres_are_like_onions># HQ using the same TOR onion link above
38. #token-<this_message_will_self_destruct># HQ using the gerorge@chmod file founf in bash_history file via autopsy
39. #token-<c4n_y0u_pwn_1t># Via HQ when I put IP address 143.215.130.109 from Phpbb website
40. #token - <Vigenere_and_We_Dont_Care># -- Break cipher from PhpBB webpage using keyword gojakets
41. #token-<chapter_eleven> SCP Ledgers dock from phpBB using password from audacity: contact mp4

42. #token <stonkstothemoon> SCO memo file from phpBB using password found in secret_exe using Ghidra
